High-Energy Asphalt Mixer

The High-Energy Asphalt Mixer is a piece of lab equipment for the asphalt industry. Except for the motors, gearboxes, and drum drive assembly, the Asphalt Mixer is made entirely of 304 stainless steel, and designed to aggressively create up to 16 quarts of asphalt mix, which can easily be used in the PMW Linear Compactor as well as other products.

Powered by 208/220V 1-Phase, the Asphalt Mixer uses two independently driven, 1hp motors to counterturn the paddle and mixing bowl, providing good aggregate coating and shortening mixing times.

Additional mixing bowls are available in either 11.5 quart or 16 quart sizes, for an additional charge

If you have any questions, please do not hesitate to contact me at the number below.
